

Working in co-operation to develop and
implement the new balancing regime

NBM Reference Group meeting 11.2.2021

Asta Sihvonen-Punkka, Member of the NBM Steering Committee

The Nordic Balancing Program has a solid basis

- There is a shared view of the profound change in the energy system
- The legislation sets a regulatory framework for the design of the balancing regime
- The NBM responds to both energy disruption and regulatory needs

The Nordic Balancing Program is proceeding

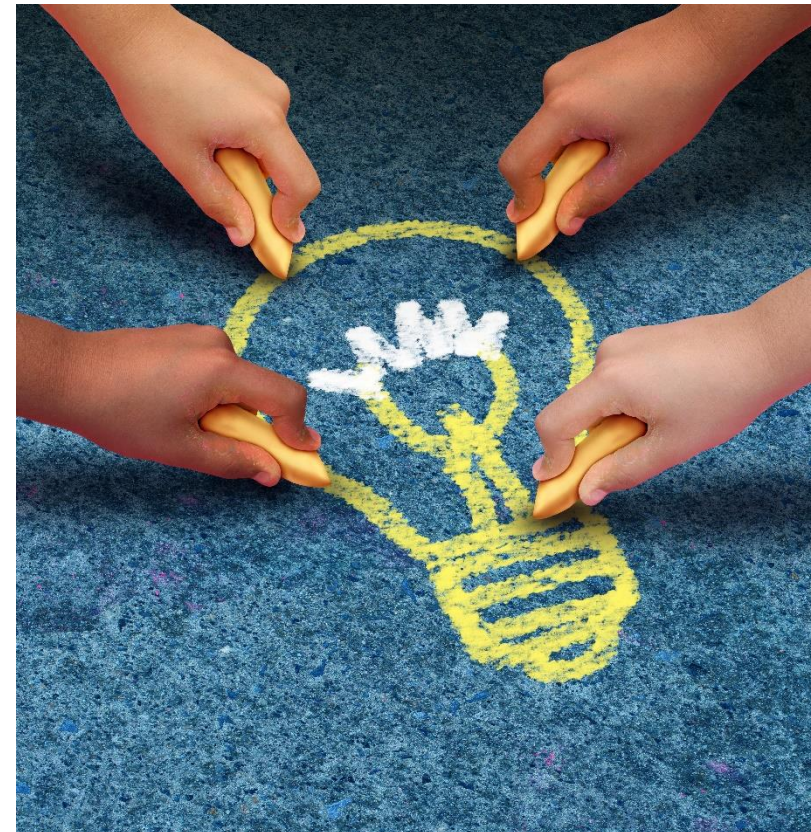

An open, involving and forward-looking stakeholder dialogue is a key

- **Reference Group** well established
- **Webinars** – both Nordic and national – used for timely sharing of information
- **Consultations** to seek stakeholder views in an organized way

Efficient and timely implementation of the NBM is in the interest of all parties as we will approach the more challenging steps of the NBM

- The next phases of implementation will include
 - 15 min markets
 - Manual and automatic FRR energy activation markets
 - Expansion towards European platforms

Thank you!
