

Nordic aFRR CM go-live and Flow-based capacity calculation

- ACER decision: Nordic aFRR CM go-live only when the cross-zonal capacity is calculated with approved Flow-based capacity calculation method
- TSOs need to demonstrate fulfillment of this requirement by submitting to NRAs an evaluation report covering at least 3-consecutive months of external parallel run (report submitted at earliest 5 months after start of external parallel run)
- Positive NRAs' conclusion of the evaluation report will fulfill the Nordic aFRR CM go-live criteria
